

Digital TV MPEG-4 Module NEOTION Pocket NP4 FTA

NEOTION
Innovation Attitude

Based on the NEOTION leading edge technology, the Digital TV MPEG-4 Plug & Play Module enables integrated digital TVs (iDTV) and DVB (Digital Video Broadcasting) decoders to receive MPEG-4 content.

Manufacturers, operators and consumers can easily convert any digital TV or DVB decoder supporting MPEG-2 into an MPEG-4 compatible product and thus provide access to digital TV channels broadcasted terrestrially or via a satellite under the MPEG-4 standard. Just plug in your Digital TV MPEG-4 Plug & Play Module into a CI (Common Interface) slot in your TV or decoder!

The Module has been designed for:

- new iDTVs equipped with an MPEG-2 decoder and CI
- stand-alone MPEG-2 DVB STB (Set-Top-Box) decoders with CI

It is the tailored solution empowering millions of MPEG-2 legacy digital TVs and decoders, the compatibility list of CI-equipped digital TVs that can support NEOTION Pocket NP4 FTA Module being available on request.
